

... 2  
... 1\*

1.  $T_1$  and  $T_2$  are two temperatures.  
2.  $T_1 > T_2$ .  
3.  $T_1 - T_2 < 6 \mu$ .

$$200 \mu \text{m} \times 10^{-6} \text{m} = 2 \times 10^{-4} \text{m} \quad (T_2)$$
